About the Healthy Minds Study

- ~800 colleges and universities, including community colleges, MSIs
- >750,000 college student respondents
- PIs: Sarah Lipson, Daniel Eisenberg, Justin Heinze, Sasha Zhou
- Based at BUSPH, UM, UCLA
- Random samples recruited from participating schools
- Online survey (Qualtrics)
- Validated screening tools/measures
- Data publicly available for researchers and others interested in this line of work: https://healthymindsnetwork.org/research/data-for-researchers/
Decreasing rates of flourishing (positive mental health)

2012 (57.1%) - 2023 (36%)

Flourishing: positive aspects of well-being, encompasses concepts such as life satisfaction, social fulfillment, purpose.
Increasing rates of depressive symptoms
2013 (22%) - 2023 (41%)

Note continued trends during COVID years
Increasing rates of anxiety symptoms
2013 (17%) - 2023 (36%)
Increasing rates of suicidal ideation
2007 (6%) - 2023 (14%)
>80% of students report academic impairment due to mental health concerns, AY 2022-23

**ACADEMIC IMPAIRMENT**

In the past 4 weeks, how many days have you felt that emotional or mental difficulties have hurt your academic performance?

- 19% None
- 29% 1 - 2 days
- 23% 3 - 5 days
- 22% 6 or more days

- Poor mental health may decrease one’s interest in the future, which would reduce one’s willingness to make long-term investments like schooling
- Symptoms may affect the productivity of time in academic activities and overall academic performance
- Significant increase from 2020-2022
- Mental health problems associated with negative academic outcomes
- Untreated depression associated with 2x increase in likelihood of stopping/dropping out
- Similar patterns for untreated mental health problems and poor academic outcomes
  - BIPOC, FGLI students, on average, less likely to seek treatment, more likely to drop out/stop out
**Financial stress is a strong risk factor for poor mental health.**

<table>

Discrimination is another key risk factor (and a highly mutable one!)

![Bar chart showing the comparison of experienced discrimination and did not experience discrimination in Depression, Anxiety, and Suicidal ideation.](chart.png)
Mental health 'treatment gap' remains wide. Barriers reflect inertia, lack of urgency.

Healthy Minds Faculty & Staff Survey

- Four survey sections
  - Demographics
  - Knowledge and attitudes
  - Experiences related to student mental health
  - Employee mental health and wellbeing
- Annual data collection began in fall 2021
- ~30 colleges/universities so far
~3/4 of faculty report having 1:1 conversations with students regarding mental health.
(Data source: Healthy Minds Faculty/Staff Survey, AY 2022-2023)

73% of faculty report having 1:1 phone, video, or email conversations with students in the past 12 months about student mental health

Likelihood of mental health conversations varies by...

Faculty academic discipline
- + Humanities, arts
- - Business, law, science, math

Faculty gender
- + female, trans and nonbinary
- - male
3/4 of faculty likely to reach out if a student is in distress, but only 1/2 have a good idea of how to recognize this.

I have a good idea of how to recognize that a student is in emotional or mental distress. If I think a student is experiencing emotional or mental distress, I am likely to reach out.

(Data source: Healthy Minds Faculty/Staff Survey, AY 2022-2023)
Faculty do not want to “make students feel uncomfortable” and feel that “someone else is better suited.”

Which of the following are reasons why you would not reach out to a student if you thought they were experiencing emotional or mental distress?

I would not want to make the student feel uncomfortable (24%)
Someone else is better suited to do this (21%)
I worry I could make things worse (21%)
I’m unsure of what to do/say to a student (20%)
I don’t feel safe (9%)
I would feel uncomfortable doing so (9%)
I don’t have enough time (8%)
It’s none of my business (5%)
It’s not my responsibility (3%)

(Data source: Healthy Minds Faculty/Staff Survey, AY 2022-2023)
Mental health work toll on faculty

How much do you agree or disagree with the following statements?:

In the past 12 months, my job has taken a negative toll on my mental or emotional health. (53% agree)

• 21% SA/A that supporting students in mental/emotional distress has taken toll on their own mental health
  ○ 27% female, 32% trans and non-binary
  ○ 13% male
Thank you!

Sarah Ketchen Lipson
sklipson@bu.edu

The Healthy Minds Network
www.healthymindsnetwork.org
healthyminds@umich.edu
Mental health initiatives at The Ohio State University

Ryan S Patel DO, FAPA
patel.2350@osu.edu

Board Director, American College Health Association, and Chair of the mental health section, ACHA

College Psychiatrist, T.OSU Office of Student Life, Counseling and Consultation Service
Objectives

• Discuss mental health strategies at Ohio State
• Considerations for institutions with limited resources
• Future considerations
• Acknowledgement to ACE for Advocacy efforts and for this program

• As you saw from the data and the Assistant Secretary Rodriguez’s remarks, mental health challenges have been rising and exacerbated by the Pandemic, challenges continue. Comprehensive post secondary student program is another good step in the right direction.

• Students need support in a variety of ways.

• How have we addressed this challenge at OSU?
Whole campus approach at OSU

• Campus mental health is a large scale and multi-factorial problem requiring multifactorial solutions.
• OSU is taking a “Culture of care”, that mental health on campus is everyone’s responsibility—faculty, students, staff, administration, leadership, community, parents, etc: everyone has a role on campus mental health.

Ryan Patel DO, FAPA
Inter department groups
Consistent messaging (mental health support options page)
Team based approach (SHS+Wellness+CCS+ Embedded program+ community providers, telehealth), CPD, newsletter, Hospital relationships, Stepped care 2.0
Large embedded program (Engineering, housing, arts and sci, grad/professional schools)
Skills workshops
- At CCS Food sleep exercise strategies, anxiety, dbt perfectionism, etc
- Wellness center: time stress management, aod, wellness coaching (9+dimensions) etc, digital wellness, PAL, pet therapy, DCTC, BASICS/CASICS, CRC
Civility, Loneliness
Center for Belongingness and inclusion
OSU

• ACHA NCHA, and Healthy MINDS data
• Rec sports: single vs team signup, stand alone and season long options
• Technology: Healthiest You, Uwill, previously also tried Silvercloud, App, My Blog (130k+), Podcast, PAL, Biofeedback, Mindfulness, Protocall, MH Strategies videos
• Faculty staff wellbeing: Wellness programs for faculty staff, syllabus statements, faculty led MH programming, advisors, res life
• REACH program for bystander intervention/recognition, 988
Faculty

- In class 2-3 minute Mental health moments, gratitude/mindfulness exercise, positive imagery, words of inspiration/encouragement, humor
  - https://wexnermedical.osu.edu/integrative-health/resources/mindfulness-practices
- Timing of exams
- Collaborating with other faculty regarding online/cancel class strategically
- Instructional breaks, etc
Academic advisors

NCHA III spring 21

50% of students reported that academics caused them “high distress” and 39% reported it caused them “medium distress” in 12 months

Reasons for meeting with academic advisor: 32% “overwhelming”, 21% “stress”, 3 % “anxiety”

“If you had a mental health problem impacting academic performance, which people at school would you talk to? Academic advisor ~25%, faculty ~4%, Dean ~4%, Professor 14%, Staff 12%
• **Gatekeeper training for faculty, advisors, students, and staff:**

• Provides basic skills for supporting people with mental health and substance use issues and referring them to the appropriate resource.
  - Examples: Mental health first aid, qpr, REACH, etc. Brief trainings similar to title IX training (JED)
Campus community

• Community resources page, partnering with community organizations, providing trainings
• Collaborative relationship (trainings, process/flow meetings, demand communication)
• Communication across units
• Vending/dining
• Res Halls: embedded counselors, quiet hours, intervention based programming
Student body

- Gatekeeper training, peers reaching out.
- Sky yoga
- Peer support program: PAL, chat
- MH ambassador program
- Wellness peer coaching: nutrition, exercise, goalsetting
- Workshop facilitators wellness programs and MH outreach, automation
Parents: workshops, newsletter

• Proactively Educating on:
  • Health insurance: proactive parent education
  • Campus area capability to support a students pre-existing/baseline mental health needs
  • MH services in and around community
  • College preparedness (life-style, self-efficacy, etc.)
  • Supporting the students nutrition and life behaviors
  • Expectation management of the student, campus, and community
  • Health and wellness: being a model
Ideas for under-resourced institutions

• Inform Assess Connect (consistent with CDC Youth MH, school model)
• Strategy to inform
• Mindfulness
• Free apps (next slide)
• Partnering with telehealth providers (Timely Md, Academic live care, Better help, Talkspace, etc)
• Partnering with community
• Peer ambassador programs
• Recorded programming (like our skills videos and workshops)
• Syllabus statements
• Gatekeeper training: Mental health first aid, QPR, etc. Brief trainings similar to title IX training (JED), 988.
• Garrett Lee Smith grant funding
Mindfulness benefits a broad array of mental health concerns

• A review of 13 studies showed improvement in ADHD symptoms with mindfulness meditation (1).

• 41 trials show mindfulness meditation helped improve stress related outcomes such as anxiety, depression, stress, positive mood, etc. (2)

• Addictive behavior

Mindfulness Meditation apps can be made available to the entire campus body (SHI, example)

**Calm app** (Institutional subscription)
25+ studies
More research ongoing
Also helps with mood

**Headspace**
“Learn how to relax, manage stress and focus your energy to become more centered and well rested.”
Both have discounts for students, some insurance plans also offer these.

Life behaviors and mental health

• Large and growing research showing the role of nutrition, exercise, sleep behaviors and mental health. **Highest yield interventions with potential for most amount of benefit.**

• A significant area of deficit for a large number of college students

• Natural student interest in using this approach

• **Wellness: exercise, sleep, nutrition for mental health programs at scale.** FYSS/STEP credit? (Example: My workshop program)
  • Students are provided with a 1 hour education session on the connection, foods to avoid/increase, problem solving.
Poor sleep is associated with increased suicidal behaviors (2.7x odds) in college students – even when controlling for depression; (n=1,700). Becker SP et al. J Psychiatr Res. 2018 Apr;99:123-8.
Nutritional patterns and depression risk

In total, 21 studies from ten countries.

- A dietary pattern characterized by a high intake of fruit, vegetables, whole grain, fish, olive oil, low-fat dairy and antioxidants; low intakes of animal foods was apparently associated with a decreased risk of depression.

- A dietary pattern characterized by a high consumption of red and/or processed meat, refined grains, sweets, high-fat dairy products, butter, potatoes and high-fat gravy, and low intakes of fruits and vegetables is associated with an increased risk of depression.

Li Y1, Lv MR2, Wei YJ3, Sun L2, Zhang JX4, Zhang HG5, Li B6.

Additional recommendations:

- Mediterranean, Norwegian, or Japanese diet;
- Increase consumption of fruits, vegetables, legumes, wholegrain cereals, nuts, and seeds;
- Limit your intake of processed-foods, 'fast' foods, commercial bakery goods, and sweets. (<10% of total daily calories, CDC.gov)

Systematic review: Dietary recommendations for the prevention of depression
R.S. Opie, C. Itsiopoulos, N. Parletta, A. Sanchez-Villegas, T.N. Akbaraly, A. Ruusunen & show all
Pages 161-171 | Published online: 02 Mar 2016

Most college aged students are NOT meeting fruit, vegetable, dairy, whole grain intake based on DGA (dietaryguidelines.gov)
Health index score:56/100

Fruit/veg 3+/d 17 % & 30%
(ACHA NCHA 2023)
2023: 43% met activity guidelines for active adults
ACHA-NCHA 2023
Sedentary Behavior and anxiety

*Sedentary behavior increases anxiety (<5k steps per day).*

Experimentially increasing sedentary behavior results in increased anxiety in an active young adult population.
Edwards MK¹, Loprinzi PD².

Systematic review of $k = 31$ original studies (total $N = 99,192$) and $k = 17$ secondary analyses (total $N = 27,443$), showed higher levels of symptoms of anxiety were associated with higher levels of SB, more pronounced in adults than children/adolescents.

Exercise may be a useful treatment for anxiety.

13 cross-sectional studies with 110,152 participants
11 longitudinal studies with 83,014 participants were included in this meta-analysis.
RR of depression for the highest versus non-occasional/occasional sedentary behaviour was 1.25 (95% CI 1.16 to 1.35, I²=50.7%) for all included studies.
The pooled RRs of depression for sedentary behavior were 1.31 (95% CI 1.16 to 1.48) in cross-sectional studies and 1.14 (95% CI 1.06 to 1.21) in longitudinal studies.
Bi-directional relationship.
Future considerations

• Using the ACHA+NCHA and Healthy Minds data (students, faculty, staff), ACHA wellbeing assessment (faculty/staff)
• National Faculty and Staff Health Assessment (acha.org)
• Healthy campus inventory/consulting
• Identify outcomes related to: Sleep, exercise, nutrition, connectedness, healthy ways of using technology, AOD.
• The challenge is to identify these and other outcome variables in populations on your specific campus then design programs/systems to address those. Taking the “what” and personalizing the “how” to your campus. The highest yield area for greatest mental health impact.
• “Our goal is to have the students Leaving the campus healthier than they came”—Cherie LeBlanc Wash U
Conclusions

• Campus mental health at OSU is not limited to one specific department or unit, it is everyone’s responsibility → collective impact to address the large-scale problem.

• Campus mental health is a large scale multi-factorial problem requiring multifactorial solutions.

• Everyone can contribute positively to impact campus mental health.

• Follow up: patel.2350@osu.edu

• Additional references are in my book, *Mental Health for College Students*

- ACHA Well-being Assessment (WBA) - acquired from Wake Forest University in 2023
Syllabus statements

• Sets the tone, procedure, expectations ahead of time, impacts student mindset and perception

Example

• “As a college student, there may be times when personal stressors interfere with your academic performance and/or negatively impact your daily life. If you or someone you know is experiencing mental health challenges at Caldwell University, please contact Counseling Services located within the Wellness Center on the 2nd floor of the Newman Center or call 973-618-3307. Their services are free and confidential. In a crisis situation, contact Campus Safety and Security at 973-618-3289 or the Police at 911. The New Jersey Hopeline also offers a 24-hour hotline at 855-654-6735.”

• https://www.smith.edu/sites/default/files/media/Office%20Images/Sherrerd%20Center/Sample%20of%20Mental%20Health%20Statements%20for%20Syllabi.pdf

In and out of class strategies

- **Examples of Emotional Wellness Activities and Promotion inside the classroom:**
  - Utilize a bulletin board to highlight free mindfulness and digital wellness apps
  - Recognize stressful times throughout the semester (first round of exams, midterms, finals, etc.) and plan accordingly to offer additional support and leniency to students during that time
  - Post a wellness or self-care statement on syllabus – the Student Wellness Center has an example syllabus statement
  - Know campus resources and appropriately refer students when necessary

- **Examples of Emotional Wellness Activities and Promotion outside the classroom:**
  - Build your own stress ball during a meeting – use balloons and rice or sand for a low cost activity
  - Mindfulness Night
  - Bring Therapy Dogs to a group meeting – [Therapy Dog International](https://www.therapydog.com) has a request page
  - Self Care night with face masks, sugar scrubs, nail polish, etc.

[https://swc.osu.edu/wellness-education-and-resources/ten-dimensions-of-wellness/emotional-wellness](https://swc.osu.edu/wellness-education-and-resources/ten-dimensions-of-wellness/emotional-wellness)
Key Data Points

1.) About 50% of all campus counseling center services nationwide are utilized by 20% of clients (Center for Collegiate Mental Health).
2.) Many current counseling clients are actually former clients who have returned to seek services again.
Key Data Points

3.) Counseling center staff often report high levels of burnout and rate unscheduled appointments and crisis response as the largest source of this burnout.
4.) Many clients are meeting with a licensed provider for sub-clinical needs, even though individual counseling is not the most effective intervention.
### PRIMARY OBJECTIVES OF CCCM

<table>
<thead>
<tr>
<th>Objective #1: Provide specialized services for students with high mental health needs</th>
<th>Objective #2: Foster Peer Support Communities and Recovery Services for a wide range of mental health domains</th>
</tr>
</thead>
<tbody>
<tr>
<td>Objective #3: Implement dedicated triage and crisis response services</td>
<td>Objective #4: Work with campus partners to serve students with sub-clinical needs</td>
</tr>
</tbody>
